BM-2V

**Gas mixing systems for 2 defined gases, designed for a variety of industrial applications, for direct cylinder connection (high pressure).**

BM-2M capacity range up to approx. 111 NI/min.  
BM-2V capacity range up to approx. 142 NI/min.  
For the exact pressure and flow capacity ratios, please see the technical data overleaf.

### Benefits

- no more components required e.g. pressure control – for low costs
- compact design
- easy to install
- protection of downstream equipment using 2 integrated blow-off valves to protect against dangerous overpressures

### Easy operation

- proportional mixing valve with a control knob and %-scale provides infinitely variable mixture settings
- infinitely variable flow setting with scaled adjustment knob (BM-2M)
- a pressure regulator provides infinitely variable outlet pressures (BM-2V)

### High process reliability

- independent of pressure fluctuations in the gas supply
- independent of withdrawal fluctuations (in permitted range)

**Other models, options and accessories available upon request.**

**Please identify the individual gases at the time of enquiring!**
